Q:

Is there a way to permantly set the number of hotel stacks, shelves/hotel, and shelf pitch (DM29, DM25, DM23)permanently in the firmware like we do with the z-travel, turn axis, etc. variables that we save with the "Thermo Updater" program?
Can you provide us with a tool to do this?
Also, for the open air carousel, what step size should we use for the deep well plate (DM23)?

A:

There are two proposals:

1. You send us the serial number of the system ("RD DM109") and the constants to put in and we will provide you a COD-File and a download program.

2. Our ActiveX library supports a configuration feature that allows you to edit the DM-settings. A call of this function will update the DM's

The open carrousel has 788 vor 23mm -> for DWP there would be 50mm = 1713 steps.
